Feedback Carpinsystem v5

Main Issue:

- The client wants the page elastic. I know it's a big change but we are still in design phase. The minimum width would be 980px, the maximum compatible with the iPad (if I'm not wrong). All the content, including the header and the footer, will be elastic. A 5% margin should be left blank at each side.
- There will be a third language: French.

General:

- Slightly darker blue color on the header (background of the menu).
- Use the same darker color to the square in Our Products 1 and 2.
- The Our_products_3 will have a variation (Our_Products_4): It will be very similar to the Our_Products_3 without gallery, but with the featured image larger and the text on the right smaller. This Our_Products_4 will be the one for the main categories. When the user clicks on a subcategory, nothing changes on the content. The content only changes on main categories and products.

Our Products_3:

- Make the right column, with the image enlarged, wider. The same wide as the Product name div just above. And reduce the left div with the thumbnails to the wide of the featured image.

Contact Page:

- Add the possibility to add an attachment to the contact form.
